All claims of the application are allowable over the prior art of record.

The closest reference Ishii et al (US Patent Number 5,157,732) teaches image motion vector detection and image fluctuation stabilizer highly stabilize images or frames without causing unnatural visual feelings. This method is carried out by the means of differential value, cumulative addition, minimal point detection, reliability judgment and median selection that all result in interpolation enlargement.

However, none of them either by itself teaches disclosing the method of Chen in regarding stabilizing a sequence of image frames by the means of computing motion vectors, the classify of the motion vectors, which will result in identifying motion clusters in the image frame. Respective spatiotemporal consistency values of the persistence motion clusters are calculate, such that

motion stabilization reference will be base on resulting the creation of motion-stabilizing version of the sequence.

3. In view of the amended claims, the new independent claim 1, 20 and 36 and all dependent new claims are allow. Any comment considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee.
